Subject: RE: Flipping the River?

Hello Steven,

This is related to moving the river from the temporary channel with the HDPE Liner and Turf (right bank) to the section of the river that has active stabilization construction occurring (left bank) in order to remove the liner and turf material- in HPA/APPs, there is an exhibit detailing how this will be done. This part of the temporary stabilization does involve the possibility of needing to block fish access/remove any fish remaining while this occurs- there is also a plan for this in APPs.

Sincerely,
Gwen Lentes

Gwen,

On the call today, I heard the term flipping the river. What does that mean on the Electron site. They will stop flow and dewater bays were fish are kept and redirect the river? Will this move the river from the temporary channel with the HDPE Liner and Turf to another channel?

Thanks,
Steven
